148	147	140	128	97	7/8	95	13	2
150	148	165	124	98	7/9	101	13	2
159	149	208	119	101	7/10	99	10	4
168	161	223	119	94	7/11	94	14	3

Sloar flux was in the 80s and 90s in May, and the June peak of 89 occurred on the 10th and 11th; July seems to have peaked at 101 on the 9th. KH6BZF Reports the possibility of a 27.5-day cycle developing, and it might pay to look at the bands around Aug 8-12 or so. That coincides with the Worked All Europe Contest CW weekend.

During last weekend's Radiosport Contest, 15 Meters opened to Europe for most of the Eastern U.S., and 20 Meters had a fair opening to Japan Sunday morning.

- There are reports of a new Russian over-the-horizon radar, operating only on 14 MHz, according to the latest W5YI Report, which notes that the sound is different from the familiar Woodpecker, it covers about 30 KHz, and appears to be coming from the vicinity of Odessa, near the Black Sea. W5YI says the FCC's Treaty Division is in the process of lodging a complaint, and the case number is 85-WA295.

- Now there's hope for working the elusive VR6TC...phone for a sked, as the Wall Street Journal reports that Pitcairn is now served by AT&T. There is one telephone for the island's residents; the cost from the U.S. is \$11.83 for three minutes, and you have to make a reservation to get your call through. Competitor MCI Communications, which recently bought Satellite Business Systems, said they were surprised AT&T had staged this coup. MCI didn't think that SBS served Pitcairn.

- A nice letter from George, W1GKK, responded to our report in Issue 293 about "who's on top?" George admitted that he's "worked them all, 368 including the Cyprus changeover, plus a few oddballs." George also confesses that he had 100 countries confirmed in 1939 but never applied for DXCC, and confirms that he was one of the ones who dropped out of DXCC in 1966 (but he came back, as we said).

- One of the topics likely to be discussed at next week's ARRL board meeting is whether to publish a description of how DXCC country status is determined and granted or denied. Some have expressed concern that too much secrecy surrounds the decision-making process at headquarters. Others feel that the criteria, as spelled out on page one of every DXCC Countries List, is suitably clear and generally applied fairly. Your director would probably like to have your opinion on this matter, but time is short.

Another matter which will be discussed is the continuing volunteer examination program and the possibility of ARRL assuming issuance of callsigns.

A recent poll of ARRL members in New England asked them what topics could be cut from QST if that became necessary in the face of declining editorial page space). The two areas favored by readers for reduced coverage were DX and contests.

Another topic which will come up at the board meeting is what to do about organized activities on 24 MHz. The speculation is that for the time being there will be no contests but that contacts on the band will count for awards such as DXCC.

On a related note, another entry came in for our band-countries listings, and included 62 DXCC countries on 10 MHz. We think we will start including both 10 and 24 MHz in the listings, even though there are some countries which do not have either band.

- An European correspondent replied to someone's proposal in a recent issue about perhaps counting U.S. bases in Japan the same way that the British bases in Cyprus are now counted for DXCC. He points out that both old and new maps of Cyprus identify Akrotiri and Dhekelia as sovereign British territory, but that no maps of Japan mention anything about U.S. bases. The one other spot in the world which has the same status as the RAF bases, and which as therefore always counted for DXCC is, of course, Guantanamo Bay, Cuba.

- USSR Tidbits (K1KI) lists the "Best Shortwave Radio Sportsmen of 1984," as published in the April issue of the USSR's Radio magazine: UA1DZ, UL7QF, UQ2GDQ, UB5AAF, UH8EAA, UR2QD, UB5FDF, UL7CT, UAOQWB, and UA9SAX. All are individual stations. Tom also noted that the results of the 1984 "M" contest have still not arrived at ARRL headquarters, after more than a year, and that in general Box 88 seems slower in sending certificates and medals the past few years.

- LAST CALL to send back your Survey sheets...we will start processing them next week. Thus far, the response has been about the same as past years...about 30 per cent. The 100 choices we offered seems to have worked well, although a few additions have been suggested for next year...4U1UN and ZC4 are examples.

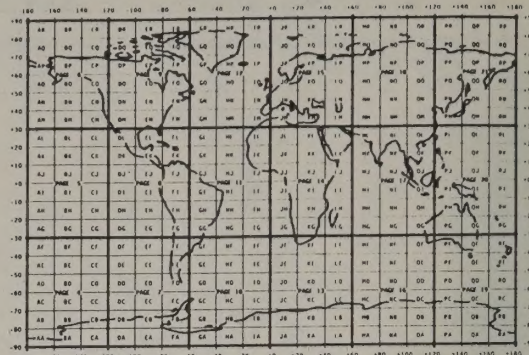

THE MAIDENHEAD LOCATOR SYSTEM

by FOLKE ROSVALL, SM5AGM

IN THE 1960s there was a need among central European amateurs for a convenient way of giving positions in contests, because the scoring was based on the distance of the contact. A system of grid locators came into use not only for contests but for general contacts, and spread to the U.S. as well (the ARRL grid squares used in VHF/UHF contests).

Because there was some lack of worldwide uniformity and some overlapping of locator naming, the author proposed in 1979 a system which would clear up these inconsistencies. By early 1985, all three IARU regions had adopted the Maidenhead Locator System.

The author has produced a world atlas showing the locators for the entire Earth. Naturally, many of the squares are over water. The Earth's surface is divided into 324 "fields," each 20 degrees longitude by 10 degrees latitude (see chart). Each field is further divided into 100 squares, each 2 degrees longitude by 1 degree latitude. Finally, each square is divided into 576 "subsquares."

This system is catching on among VHF operators, and an "honor roll" listing is published four times a year. One goal would be to work all 324 fields on the same band. The author calculates that 262 of the fields are covered by some kind of land, 8 fields are covered by permanent ice, and 54 fields are open sea.

A world atlas showing the 324 fields and also containing maps of 32,400 squares is available from Folke Rosvall, Box 8037, S-191 08 Sollentuna, Sweden, for a large SAE and 6 IRCs.

ONE DXER'S CW HONOR ROLL PROGRESSION

IN ISSUE 291 we published a DXCC progression for one operator, which showed what had been possible since early 1979 (starting at that time with 279 mixed). Here is another progression, on CW only. Contacts for CW DXCC must have been made since January 1, 1975. In this case, the operator began 1979 with 259 DXCC countries on CW.

As a point of reference, the Honor Roll published in June 1978 QST listed W9KNI at the top of the CW section, with 283 current. Since the Honor Roll consists of the top ten numbers, not necessarily the ten numbers immediately below 283, the Honor Roll that year went all the way down to 251.

A year later, the CW Honor Roll for 1979 was topped at 299, and the bottom listing was 270.

What may be most enlightening is to put this chart next to the one in Issue 291 (which illustrates a progression in mixed mode) for comparison. Now, will someone please come up with a comparable chart for SSB only?

Incidentally, the progression here reflects the inclusion of a few deleted countries; his current total is therefore 301. W9KNI led the June, 1985 CW Honor Roll, missing only VU7A, XZ, ZA, and 70, none of which have been on the air on any mode since before 1975.

K2TQC and K6GA were both two down from W9KNI, because they had not received their CE0AA San Felix cards in time for submission. Because there ended being an "open number" (310), the bottom of the Honor Roll dropped a notch to 301, and 14 DXers must have been very surprised to find themselves on the Honor Roll!

Five years ago in The DX Bulletin

(JULY 28, 1980): ARRL announced that Okino Torishima would be deleted from the DXCC Countries List, effective December 1, 1980. It had been put on the list on May 30, 1976, as a means of cementing relations with the Japan Amateur Radio League, whose help ARRL needed in the upcoming (1979) WARC. In June, 1976, the JARL mounted a \$50,000 expedition, 7J1RL, to the reef, which, it turned out, was submerged. Scaffolding had to be erected to hold the operators and radios.

600DX was active from Somalia, the Radio Club of Conception announced an expedition to Juan Fernandez, and HK0BKX was working on an operation from Serrana Bank (since deleted).
